Two new training opportunities on how to improve mobility in your area! Sign up for both or just one.

Multimodal Transportation Planning Best Practices

Many communities are updating their comprehensive plan to promote a wider variety of transportation modes. In the process, they are making changes that improve livability and the local and regional economy. This workshop will highlight best practices for effective multimodal planning and how to coordinate local government efforts with plans of other state, regional, and modal agencies. The training, hosted by the FDOT Office of Policy Planning, is based on the recently released FDOT report *Multimodal Transportation Best Practices and Model Element*.

The training will address:
1. New multimodal planning requirements of Florida’s 2011 Community Planning Act;
2. Professionally-accepted best practices for integrated land use and transportation planning; and
3. Opportunities to coordinate the transportation element with other local, regional, and state plans.

Effective FDOT/Local Government Coordination on Mobility Planning

As local governments plan for multimodal mobility, FDOT District staff are charged with reviewing the plans in relation to the state transportation system and providing technical support. This workshop offers a framework for FDOT District staff and local governments to coordinate in plan review and link statewide planning efforts with transportation and land use planning activities of local governments. The training, hosted by the FDOT Systems Planning Office, is based on the FDOT *Mobility Review Guide* and companion checklist.

The training will address:
1. Multimodal planning concepts and strategies;
2. The Mobility Review Guide and Checklist framework for identifying the relative strengths and shortcomings of local plans from a multimodal perspective; and
3. Application of the framework by FDOT and local governments.
WHO SHOULD ATTEND?

FDOT and DEO planning staff, local government planners, transit agency staff, metropolitan planners, and others interested in improving mobility through coordinated transportation and land use planning and application of multimodal planning best practices. Each training is eligible for AICP Certification Maintenance credits based on contact hours. Click registration link for further information.

TRAINING SESSIONS:

Each training is free of charge and limited to 45 participants. Registration begins at 8:30 am. Training begins promptly at 9:00 am. Additional sessions are being planned in Jacksonville and Southwest Florida for spring/summer 2015 (see below).

► TALLAHASSEE

March 4, 2015  Multimodal Transportation Planning Best Practices
9:00 am - 4:00 pm  Register:  https://eventbrite.com/event/15497458315/
